R-PLUS SYSTEM

High performance
and comfortable

Technical changes reserved

EDP No. 297409 / 8 / uk / 05.02

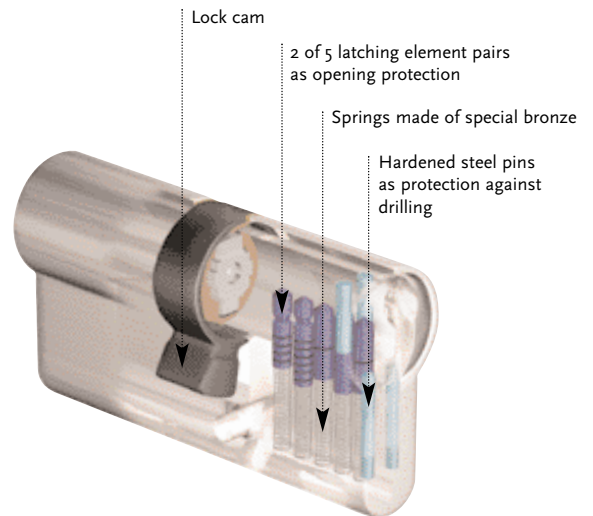

A BLACK & DECKER COMPANY

Technology for your security

A tried-and-tested classical system with real performance features: Even in the standard version, the R-Plus system is equipped with numerous security elements. These include a multi-stage system to prevent drilling, with features to stop picking and unauthorised unlocking.

Hardened, vertically-borne steel pins on the inside offer effective protection against drilling. If you require even more security, on request we can mount a reinforced ring to stop the cylinder being drawn out.

Homogeneous locking

Homogeneous locking means that you can open everything with one key: From the front door to the letter box, from the garage door to the window locks. We can also supply further cylinders for your new R-Plus system at a later date for opening with the R-Plus keys.

Cylinders for every application

Very handy in an emergency: with a cylinder lockable from both sides you can unlock one side of the door even if a key is inserted in the other side.

Forget cumbersome bunches of keys! Here you see the many possibilities for integrating additional cylinders into your new R-Plus system.

Profile double cylinder
for every door

Profile semi-cylinder
e.g. for garage doors
and garden gates

**Heavy cylinder
lever lock**
e.g. for letter boxes,
fuse boxes

Exterior cylinder
e.g. for extra rim locks

Padlock
for every application

Cylinders in every colour

Although the cylinder is the smallest part of a door, it can nevertheless be an eyesore if its colour clashes with the surroundings. The R-Plus system is available in many different finishes: matt chrome, matt nickel-plated, shining chrome, burnished brass, old German, matt brushed brass, polished brass or gilded.

”Brass, gilded, chrome-plated like my door handle”

Added security

You receive a personal system card as an added security feature with the R-Plus system. This must be presented to an authorised dealer before extra keys can be re-ordered.
